

Solaris 8 (SPARC Platform Edition) Online Release Notes Update

Sun Microsystems, Inc.
901 San Antonio Road
Palo Alto, CA 94303-4900
U.S.A.

Part Number 806-3771-10
February 2000

Copyright 2000 Sun Microsystems, Inc. 901 San Antonio Road, Palo Alto, California 94303-4900 U.S.A. All rights reserved.
This product or document is protected by copyright and distributed under licenses restricting its use, copying, distribution, and decompilation. No part of this product or document may be reproduced in any form by any means without prior written authorization of Sun and its licensors, if any. Third-party software, including font technology, is copyrighted and licensed from Sun suppliers.
Parts of the product may be derived from Berkeley BSD systems, licensed from the University of California. UNIX is a registered trademark in the U.S. and other countries, exclusively licensed through X/Open Company, Ltd.

Sun, Sun Microsystems, the Sun logo, docs.sun.com, AnswerBook, AnswerBook2, SunStore, Java, JDK, Solaris Web Start, JumpStart, NFS, HotJava, DiskSuite, Solstice AdminSuite, SunLink, Solstice AutoClient, and Solaris are trademarks, registered trademarks, or service marks of Sun Microsystems, Inc. in the U.S. and other countries. All SPARC trademarks are used under license and are trademarks or registered trademarks of SPARC International, Inc. in the U.S. and other countries. Products bearing SPARC trademarks are based upon an architecture developed by Sun Microsystems, Inc.

The OPEN LOOK and Sun™ Graphical User Interface was developed by Sun Microsystems, Inc. for its users and licensees. Sun acknowledges the pioneering efforts of Xerox in researching and developing the concept of visual or graphical user interfaces for the computer industry. Sun holds a non-exclusive license from Xerox to the Xerox Graphical User Interface, which license also covers Sun's licensees who implement OPEN LOOK GUIs and otherwise comply with Sun's written license agreements.

RESTRICTED RIGHTS: Use, duplication, or disclosure by the U.S. Government is subject to restrictions of FAR 52.227-14(g)(2)(6/87) and FAR 52.227-19(6/87), or DFAR 252.227-7015(b)(6/95) and DFAR 227.7202-3(a).

DOCUMENTATION IS PROVIDED "AS IS" AND ALL EXPRESS OR IMPLIED CONDITIONS, REPRESENTATIONS AND WARRANTIES, INCLUDING ANY IMPLIED WARRANTY OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE OR NON-INFRINGEMENT, ARE DISCLAIMED, EXCEPT TO THE EXTENT THAT SUCH DISCLAIMERS ARE HELD TO BE LEGALLY INVALID.

Copyright 2000 Sun Microsystems, Inc. 901 San Antonio Road, Palo Alto, California 94303-4900 Etats-Unis. Tous droits réservés.

Ce produit ou document est protégé par un copyright et distribué avec des licences qui en restreignent l'utilisation, la copie, la distribution, et la décompilation. Aucune partie de ce produit ou document ne peut être reproduite sous aucune forme, par quelque moyen que ce soit, sans l'autorisation préalable et écrite de Sun et de ses bailleurs de licence, s'il y en a. Le logiciel détenu par des tiers, et qui comprend la technologie relative aux politiques de caractères, est protégé par un copyright et licencié par des fournisseurs de Sun.

Des parties de ce produit pourront être dérivées du système Berkeley BSD licenciés par l'Université de Californie. UNIX est une marque déposée aux Etats-Unis et dans d'autres pays et licenciée exclusivement par X/Open Company, Ltd.

Sun, Sun Microsystems, le logo Sun, docs.sun.com, AnswerBook, AnswerBook2, AnswerBook2, SunStore, docs.sun.com, Java, Java Development Kit (JDK), Solaris Web Start, JumpStart, NFS, HotJava, DiskSuite, Solstice AdminSuite, SunLink, Solstice AutoClient, et Solaris sont des marques de fabrique ou des marques déposées, ou marques de service, de Sun Microsystems, Inc. aux Etats-Unis et dans d'autres pays. Toutes les marques SPARC sont utilisées sous licence et sont des marques de fabrique ou des marques déposées de SPARC International, Inc. aux Etats-Unis et dans d'autres pays. Les produits portant les marques SPARC sont basés sur une architecture développée par Sun Microsystems, Inc. Netscape Navigator est une marque de Netscape Communications Corporation.

L'interface d'utilisation graphique OPEN LOOK et Sun™ a été développée par Sun Microsystems, Inc. pour ses utilisateurs et licenciés. Sun reconnaît les efforts de pionniers de Xerox pour la recherche et le développement du concept des interfaces d'utilisation visuelle ou graphique pour l'industrie de l'informatique. Sun détient une licence non exclusive de Xerox sur l'interface d'utilisation graphique Xerox, cette licence couvrant également les licenciés de Sun qui mettent en place l'interface d'utilisation graphique OPEN LOOK et qui en outre se conforment aux licences écrites de Sun.

CETTE PUBLICATION EST FOURNIE "EN L'ETAT" ET AUCUNE GARANTIE, EXPRESSE OU IMPLICITE, N'EST ACCORDEE, Y COMPRIS DES GARANTIES CONCERNANT LA VALEUR MARCHANDE, L'APTITUDE DE LA PUBLICATION A REPONDRE A UNE UTILISATION PARTICULIERE, OU LE FAIT QU'ELLE NE SOIT PAS CONTREFAISANTE DE PRODUIT DE TIERS. CE DENI DE GARANTIE NE S'APPLIQUEURAIT PAS, DANS LA MESURE OU IL SERAIT TENU JURIDIQUEMENT NUL ET NON AVENU.

	Upgrade Issues	16
	Solaris Easy Access Server (SEAS)	16

Priority Paging Is Not Needed With the New Solaris 8 Caching Architecture	16
Installation Bugs That Occur During an Upgrade	
When Using Already Installed Patches for Sun Microelectronics Platforms During an Upgrade From the Solaris 7 8/99 Operating Environment to the Solaris 8 Operating Environment (4240147), the System Fails to Boot	17
Relocated CDE from the Solaris 2.5.1 Operating Environment Orphaned By An Upgrade to the Solaris 8 Operating Environment (4260819)	18
Upgrading the Solaris 7 Operating Environment With Web-Based Enterprise Management (WBEM) 1.0 to the Solaris 8 Operating Environment Causes WBEM 2.0 to Not Work (4274920)	19
Disk Space Requirements Can Be Exaggerated by the Upgrade Process (4041733)	19
Upgrading AnswerBook Collections Can Make Some Collections Inaccessible (4299682)	20
SUNWeeudt Partially Fails to Install During an Upgrade (4304305)	20
64-Bit Solaris Issues	21
Sun UltraSPARC System (sun4u) May Need Boot Flash PROM Upgrade	21
Localization Bugs	22
Some Error Messages and Dialogs Are Not Localized and Display Only in English (4283839)	22
Installation Of European Software (4299758)	22
Swedish Locale: Unlocalized Dialogs Are Displayed During Installation (4300655)	22
French and Italian Install Wizards May Display {0} Instead of the CD Title (4302549)	23
Motif suninstall Fails in de_AT.ISO8859-15 and fr_BE.ISO8859-15 Locales (4305420)	23
German Locale: Add and Cancel Buttons in the Proxy Kiosk Screen are Labeled as Undefined (4306260)	23
2. Solaris Runtime Issues	25
Common Desktop Environment (CDE) Issues	26

User Settings For Screen Blank, Also Known As Monitor Power Saver,
Are Ignored 26

Common Desktop Environment Bugs 26

dtmail Does Not Produce a Core File By Default (4249157) 26

PDASync Cannot Delete Last Entry From the Desktop (4260435) 26

PDASync Does Not Support Data Exchange With the Multibyte
Internationalized PDA Device (4263814) 27

Compiling Motif Programs on the Solaris 8 Operating Environment
(4172061) 27

System Administration Bugs 28

Exception: PS_UNAVAILABLE: 1 (out of memory) Error Occurs When
Trying To Add Instances With WBEM (4284874) 28

WBEM Common Information Model Object Manager Crashes When
Solaris_FileSystem Instances Are Requested (4301275) 28

Java Runtime Issues 29

Java Plug-in Support 29

Java Runtime Bugs 29

Warning Messages Are Displayed When Running Java2 Applications In
UTF-8 Locales (4254198) 29

libjvm.so Does Not Function Correctly When Using dlopen
(4270715) 30

AnswerBook2 Bugs 30

The ab2admin Command Intermittently Indicates command failed
Even Though the Command Succeeded (4242577) 30

ab2cd Script Displays an Erroneous Error Message (4256516) 31

Localization Bugs 31

Some Greek Characters Are Not Available in CDE (4179411) 31

Cannot Print Extended Characters in Calendar Manager in All Partial
Locales (4285729) 31

Cutting and Pasting Text Between Arabic and UTF-8 English Does Not
Work (4287746) 31

The Extras Drop-Down Menu Is Not Available for European Locales (4298547)	32
CTL Is Not Supported in Japanese and Asian UTF-8 Locales (4300239)	32
Screens in Several Applications Have Not Been Localized (4301212, 4301555, 4299487, 4301507, 4304495)	33
Cannot Read Arabic Messages Correctly When Using <code>dtmail</code> Between the Solaris Operating Environment and Microsoft Windows (4301870)	33
Cannot Add, Remove, or Modify Users in Solstice AdminTool in the Greek Locale (4302983)	33
Font Downloader Add and Cancel Buttons Are Incorrectly Labeled (4303549)	33
Missing Arabic Characters and Incompatibility Between the Sun Arabic Keyboard and the Microsoft Arabic Keyboard (4303879)	34
Use Font Downloader to Print From Any Non-ISO8859-1 Locale (4304493)	34
Unlocalised Messages Displayed in SEAM Application (4306619)	35
The Euro Currency Symbol Is Not Adequately Supported in the UTF-8 and Greek Locales (4306958, 4305075)	35
Sorting in the European UTF-8 Locales Does Not Function Correctly (4307314)	35
Hexadecimal Support No Longer Works Correctly in <code>dtcalc</code> With Swedish Localization (4308864)	36
3. Late-Breaking News	37
PIM Kernel Support	37
Configuring Runtime Search Paths	37
4. End-of-Software Support Statements	39
Current Release	39
HotJava Browser	39
Solaris Java Development Kit: JNI 1.0 Interface	39
Solstice AdminSuite 2.3/AutoClient™ 2.1	39
Lightweight Directory Access Protocol (LDAP) Client Library	40

F3 Font Technology	40
XGL	40
Derived Type <code>paddr_t</code>	40
Changes to Application Programming Interfaces (APIs) for User Accounting Data	40
The <code>sysidnis(1M)</code> System Identification Program	41
Sun4c-Based Systems	41
SPARCstation Voyager	41
SPARC Xterminal 1	41
Future Releases	42

7. Released Patches Integrated into the Solaris 8 Release 55

Patches 55

Preface

The *Solaris™ 8 (SPARC™ Platform Edition) Online Release Notes Update* contain installation problem details and other information that was not available until immediately before the release of the Solaris 8 operating environment.

Who Should Use This Book

These notes are for users and system administrators who are installing and using the Solaris 8 operating environment.

Related Books

You may need to refer to the following manuals when installing Solaris software:

- *Start Here*
- *Solaris 8 (SPARC Platform Edition) Installation Guide*
- *Solaris 8 Advanced Installation Guide*
- The Solaris 8 release notes are available:
 - In the Solaris 8 Release Document Collection on the Solaris 8 Documentation CD.
 - In print with the product (installation issues and bugs only).
 - On <http://docs.sun.com> (the most up-to-date information).

- *What's New in the Solaris 8 Operating Environment*
- *About Solaris 8 Documentation*

Solaris documentation is available on the Solaris 8 Documentation CD included with this product. Although *Solaris 8 (SPARC Platform Edition) Online Release Notes* is published in the Solaris 8 Release Document Collection on the Solaris 8 Documentation CD, late-breaking information has been included in *Solaris 8 (SPARC Platform Edition) Online Release Notes Update*.

Ordering Sun Documents

Fatbrain.com, an Internet professional bookstore, stocks select product documentation from Sun Microsystems, Inc.

For a list of documents and how to order them, visit the Sun Documentation Center on Fatbrain.com at <http://www1.fatbrain.com/documentation/sun>.

Accessing Sun Documentation Online

The docs.sun.comSM Web site enables you to access Sun technical documentation online. You can browse the docs.sun.com archive or search for a specific book title or subject. The URL is <http://docs.sun.com>.

Installation Issues

The following installation-related bug descriptions have been added in this chapter since this document was published on the Solaris 8 Documentation CD. A revised version of this chapter was published in the printed *Solaris 8 (SPARC Platform Edition) Release Notes*:

- Bug ID 4240147
 - Bug ID 4309047
 - Bug ID 4310705
-

Issues You Need to Know About Before Starting an Interactive Installation From the Solaris 8 Software 1 of 2 CD

Locale Install Mechanism Change

The locale support installation mechanism has changed in the SolarisTM 8 operating environment. In the Solaris 2.5.1, 2.6, and 7 operating environments the level of locale support installed depended upon the software cluster chosen. The Solaris 8 operating environment includes a new install interface that prompts you to select specific geographic regions for which you require locale support. Therefore, you can customize the configuration of your system when you install the Solaris 8 operating environment more than was possible in the Solaris 2.5.1, 2.6, and 7 operating environments.

Pay special attention to the following behaviors:

- Locales to be installed must be selected during the initial installation in the Geographic Selection screen. `C` (POSIX locale) and `en_US.UTF-8` (Unicode support) are the only locales that are automatically installed.
 - When you upgrade from previous releases, some of the locales are automatically selected, depending on the available locales on the system to be upgraded. Note that English, French, German, Italian, Spanish, and Swedish partial locales were always present on the system in the Solaris 2.5.1, 2.6., and 7 operating environments.
 - Unicode locales (UTF-8) have a feature to enable multi-lingual text input. Because these locales utilize Asian input methods that are provided by each individual locale, install those Asian locales for which you need to enter text.
-

Installation Bugs That Occur During an Interactive Installation

Installation Progress Bar May Be Inaccurate (1266156)

The Installing Solaris Software - Progress bar sometimes indicates that an installation is complete when it is still in progress. The install program may add packages for several minutes after the progress bar has indicated that the installation is complete.

Do not rely on the progress bar to indicate that the installation is complete. The installation displays the following message when the program has completed all installation operations.

Installation complete

Warnings May Occur When Creating a File System (4189127)

One of the following warning messages may be displayed when creating a file system during installation.

```
Warning: inode blocks/cyl group (87) >= data blocks (63) in last cylinder group. This implies 1008 sector(s) cannot be allocated.
```

or

```
Warning: 1 sector(s) in last cylinder unallocated
```

The warning occurs when the size of the file system being created does not map exactly to the space on the disk being used. This can result in unused space on the disk that is not incorporated into the indicated file system. This unused space is not available for use by other file systems.

Workaround: Ignore the warning message.

No Error Occurs If # Is Included In A Path (4294586)

If a # is included in the path of a JavaTM program, the following message is displayed when you execute the program.

```
Exception in thread "main" java.lang.NoClassDefFoundError
Volume Management (vold) sometimes uses a pound sign in a path
when creating directory names:
```

Workaround: Delete the # from the path or do not use any Java installation wizards.

Custom JumpStart Does Not Prompt for the Solaris 8 Software 2 of 2 CD (4304912)

After installing the Solaris 8 Software 1 of 2 CD, a custom JumpStartTM installation does not prompt you to install the Solaris 8 Software 2 of 2 CD.

Workaround: If you are installing only the End User software group, you do not need to install the Solaris 8 Software 2 of 2 CD as the End User software and its basic locale support is contained on the Solaris 8 Software 1 of 2 CD.

- If you are installing the Entire Distribution plus OEM, Entire Distribution, or Developer software, and are using a custom JumpStart installation from a server, use a network install server that contains the Solaris 8 1 of 2, 2 of 2, and Language CDs. See “Creating a Profile Server” in *Solaris 8 Advanced Installation Guide*.
- If you are installing the Entire Distribution plus OEM, Entire Distribution, or Developer software and are using a custom JumpStart installation from a diskette, follow the steps below to install the Solaris 8 Software 2 of 2 and Language CDs:

1. After the custom JumpStart completes the installation of the Solaris 8 Software 1 of 2 CD, reboot the system.
2. Log in to the system.
3. Insert the Solaris 8 Software 2 of 2 CD.
4. Execute the `installer` command and follow the instructions on the screen to install the remaining software.
5. Insert the Solaris 8 Languages CD.
6. Execute the `installer` command and follow the instructions on the screen to install any languages.

Wizard Stops If You Insert the Solaris 8 Software 2 of 2 CD When the 1 of 2 CD Is Requested (4306752)

For some English-only versions of the Solaris 8 Installation CD, the installation program enables you to insert the Solaris 8 Software 2 of 2 CD at the point the installation program requested the Solaris 8 Software 1 of 2 CD.

If the incorrect CD has been inserted, the installation program attempts to use it even though it can no longer install the Solaris operating environment.

If you are performing a default installation, the following message is displayed in the summary panel's Details window:

```
ERROR: Could not load the media (/cdrom)" error message
```

If an Installation CD custom install had been selected, a blank panel would be displayed immediately after choosing Custom and selecting the Next Panel button.

Workaround: Insert the Solaris 8 Software 1 of 2 CD when requested. If you inserted the Solaris 8 Software 2 of 2 CD after a blank screen was displayed, you need to restart the installation by beginning with the "Boot CD-ROM" step.

An Arithmetic Exception Occurs When a Zip Drive is Attached With No Media in a Drive (4307035)

Solaris Web Start reports an arithmetic exception when a zip drive is attached and no disk has been inserted in the drive. The following message is displayed:

```
Starting the Web Start 3.0 Solaris installer
./WOO.findswap[1823]: 173 Arithmetic Exception
```

```
Could not get disk information.  
Exiting
```

Workaround: Either disconnect the zip drive before you boot your system or insert the zip disk into the drive.

Cannot Perform a JumpStart Installation From a CD on the sun4us Platform (4309047)

The sun4us entry is missing from the servers_xlarge profile file.

Workaround: Set up a netinstall image using setup_install_server and modify the servers_xlarge file to include the client_arch entry for the sun4us platform. Then proceed with the JumpStart installation.

CD-ROM-Based Installation From the Solaris 8 Software 1 of 2 CD With Selection of DHCP Fails (4310705)

If a system is installed with the Solaris 8 Software 1 of 2 CD, you may be prompted to configure the system using the Dynamic Host Configuration Protocol (DHCP). If you select DHCP, the installation fails. The following message is displayed:

```
The IP address previously set on the network interface is no longer available
```

This problem does not occur if you install the system:

- From a Net Install server
- Using the Web Start installation program
- With a static IP address

Workaround: Configure the system to use DHCP after the installation has completed, use the Web Start installation program, or install the system using a Net Install server.

Upgrade Issues

Solaris Easy Access Server (SEAS)

The applications in Solaris Easy Access Server are not certified to run in the Solaris 8 operating environment. If you are running applications from SEAS, you must install the Solaris 8 Admin Pack to ensure that those applications will run properly in the Solaris 8 operating environment.

Several of the applications that are included in SEAS releases are now part of the Solaris 8 operating environment:

- Solaris Web-Based Enterprise Management (WBEM) Services
- Solaris Print Manager
- Netscape™ Communicator
- Java Development Kit (JDK™)
- Solstice™ DiskSuite™

The following SEAS applications have not been certified to run in the Solaris 8 operating environment:

- Solstice Internet Mail Server
- Sun Directory Services
- Sun WebServer™
- Solaris PC NetLink
- SunScreen™ SKIP
- Solstice NFS Client
- Java IDL
- Solstice AutoClient™
- Solaris Data Backup Utility

Priority Paging Is Not Needed With the New Solaris 8 Caching Architecture

The Solaris 8 operating environment introduces a new file system caching architecture, which subsumes the Solaris 7 Priority Paging functionality. The system variable *priority_paging* should not be set in the Solaris 8 operating environment, and should be removed from the directory `/etc/system` when systems are upgraded to the Solaris 8 operating environment.

The new caching architecture removes most of the pressure on the virtual memory system that resulted from file system activity. As a result, the new caching architecture changes the dynamics of the memory paging statistics, which makes observing system memory characteristics simpler. However, several of the statistics report significantly different values, which should be considered when analyzing memory behavior or setting performance monitoring thresholds. The most notable differences are:

- The number of page reclaims is higher, which should be considered normal operation during heavy file system activity.
- The amount of free memory is higher because the free memory count now includes a large component of the file system cache.
- Scan rates are almost zero unless there is a shortage of system-wide available memory. Scanning is no longer used to replace the free list during normal file system I/O.

Installation Bugs That Occur During an Upgrade

When Using Already Installed Patches for Sun Microelectronics Platforms During an Upgrade From the Solaris 7 8/99 Operating Environment to the Solaris 8 Operating Environment (4240147), the System Fails to Boot

When you upgrade from the Solaris 7 8/99 operating environment to the Solaris 8 operating environment using already installed patches for Sun Microelectronics platforms, the following message is displayed.

```
Installed all the SME patches (107026-04,  
107027-02, 107258-01 & 107874-01) available at  
http://sunsolve5.sun.com/fcs/me/cp1500/7/index.html
```

Messages occur as a result of:

- Both input and output functions as `ttya`
- Input functions as `ttya` and output functions as `igs`

Workaround: If you plan to upgrade from the Solaris 7 8/99 operating environment to the Solaris 8 operating environment and you have either patch IDs 107258-02 or 107258-01 installed on your system that is running the Solaris 7 operating environment, type:

```
# patchrm 107258-02  
# patchrm 107258-01
```

Then start the upgrade. Otherwise, the system fails to boot after you have completed the upgrade. After the system has been rebooted, type:

```
# patchadd 107258-02  
# patchadd 107258-01
```

Relocated CDE from the Solaris 2.5.1 Operating Environment Orphaned By An Upgrade to the Solaris 8 Operating Environment (4260819)

This problem affects systems running the Solaris 2.5.1 and the Solaris 2.5.1 unbundled CDE operating environments. However, these systems are only affected if the unbundled CDE has been relocated to a directory other than `/usr/dt`. The CDE relocation on these systems has been accomplished by creating a symbolic link in `/usr/dt` that points to the relocated CDE.

When you upgrade to the Solaris 8 operating environment, CDE is also reinstalled in `/usr/dt`, and the link to the relocated version is removed. The relocated CDE itself is not removed and is therefore orphaned.

If the upgrade involves the reallocation of file systems, the upgrade may fail because the reallocation mechanism does not account for the extra space needed in `/usr/dt` for the new version of CDE. This failure is not visible until the upgrade has been completed. If this failure occurs, the upgrade log will include a number of messages indicating that more space is needed for an upgrade.

Workaround: Uninstall the relocated CDE before you start upgrading to the Solaris 8 operating environment. This can be accomplished by using the `install-cde` script from the Solaris 2.5.1 CDE CD. This script should be run with the `-uninstall` flag to remove CDE.

Upgrading the Solaris 7 Operating Environment With Web-Based Enterprise Management (WBEM) 1.0 to the Solaris 8 Operating Environment Causes WBEM 2.0 to Not Work (4274920)

If you installed WBEM 1.0 from the Solaris Easy Access Server (SEAS) 3.0 CD-ROM on a system running the Solaris 7 operating environment, you must remove the WBEM 1.0 packages before upgrading to the Solaris 8 operating environment. The Solaris WBEM Services 2.0 do not start after upgrading the Solaris 7 operating environment with WBEM 1.0 to the Solaris 8 operating environment. The Common Information Model (CIM) Object Manager fails to start. The following error message is displayed:

```
File not found: /opt/sadm/lib/wbem/cimom.jar
```

Workaround: Use the `pkgrm` command to remove the WBEM 1.0 packages before upgrading to the Solaris 8 operating environment.

1. Use the `pkginfo` command to check if the WBEM 1.0 packages are installed by typing:

```
% pkginfo | grep WBEM
```

2. Become superuser.
3. Use the `pkgrm` command to remove all WBEM 1.0 packages by typing:

```
# pkgrm SUNWwbapi
# pkgrm SUNWwbcor
# pkgrm SUNWwbdev
# pkgrm SUNWwbdoc
# pkgrm SUNWwblm
```

Disk Space Requirements Can Be Exaggerated by the Upgrade Process (4041733)

The upgrade program can exaggerate by as much as 30 percent the amount of space required for upgrades to systems with Solaris software. Systems affected by this problem cannot be upgraded without deselecting packages or finding more space.

Workaround: You can manually reallocate disk space among file systems or use the Software Customization menu to remove software packages that are not needed.

Upgrading AnswerBook Collections Can Make Some Collections Inaccessible (4299682)

When you use the upgrade option of the installer program to upgrade an AnswerBook2 server and documentation collections from the Solaris 2.6 to the Solaris 8 operating environment, the "Solaris 2.6 System Administrator Collection Vol 1" and "Solaris 2.6 Software Developer Collection Vol 1" no longer appear in the AnswerBook2 server's database.

If you want to view the Solaris 2.6 collections, add the collections to the AnswerBook2 server's database by using either the "Add Collection to List" function on the AnswerBook2 Administration Graphical User Interface (GUI) page or type the following command.

```
# /usr/lib/ab2/bin/ab2admin -o add_coll -d
```

where the default paths are:

- /opt/answerbooks/english/solaris_2.6/SUNWaadm
- /opt/answerbooks/english/solaris_2.6/SUNWabsdk

SUNWeeudt Partially Fails to Install During an Upgrade (4304305)

The upgrade log may state that the SUNWeeudt package was only partially installed.

```
Doing pkgadd of SUNWeeudt to /.
ERROR: attribute verification of
</a/usr/dt/appconfig/types/ru_RU.KOI8-R/datatypes.dt>
failed pathname does not exist ...

Installation of <SUNWeeudt> partially failed.
pkgadd return code = 2
```

Workaround: Perform the following steps after the upgrade has been completed.

1. Remove the SUNWeeudt package by typing:

```
# pkgrm SUNWeeudt
```

2. Add the SUNWeeudt package by typing:

```
# pkgadd SUNWeeudt
```

64-Bit Solaris Issues

Sun UltraSPARC System (sun4u) May Need Boot Flash PROM Upgrade

Note - If your system is already running 64-bit ready firmware, then the flash PROM upgrade is not required.

If you want to run the 64-bit Solaris operating environment on an UltraSPARC™ system, you may need to upgrade its flash PROM firmware. The Solaris 8 installation programs have a checkbox for adding 64-bit support. This 64-bit support is selected by default when installing on Sun UltraSPARC systems. A 64-bit system only boots in the 64-bit mode by default if it has a CPU speed of 200 Mhz or greater.

Note - If you choose to run the 32-bit Solaris operating environment on any Sun™ or UltraSPARC system, the flash PROM upgrade is not needed.

The following table lists the UltraSPARC (sun4u) systems that are affected and the minimum firmware versions needed. *System type* is the equivalent of the output of the `uname -i` command. You can tell what firmware version you are running by using the `prtconf -V` command.

System Type from <code>uname -i</code>	Minimum Firmware Version from <code>prtconf -V</code>
SUNW,Ultra-1-Engine	3.10.0
SUNW,Ultra-1	3.11.1
SUNW,Ultra-2	3.11.2

System Type from <code>uname -i</code>	Minimum Firmware Version from <code>prtconf -V</code>
SUNW,Ultra-4	3.7.107
SUNW,Ultra-Enterprise	3.2.16

Note - If a system is not listed in the above table, it does not need a flash PROM upgrade.

For instructions on performing the flash PROM update using the Solaris CD, refer to the *Solaris 8 on Sun Hardware Collection*. If you do not have this manual, it can be obtained at <http://docs.sun.com>.

Localization Bugs

Some Error Messages and Dialogs Are Not Localized and Display Only in English (4283839)

French, Italian, German, Spanish, and Swedish locales have some unlocalized dialogs, a few unlocalized dialogs in help files, and help files not found during an installation.

Installation Of European Software (4299758)

If you install a European locale, additional software for windowing, installation, 64-bit support, and fonts are installed on your system. The impact of this bug is negligible because only minimal additional space is needed to support this extra software.

Swedish Locale: Unlocalized Dialogs Are Displayed During Installation (4300655)

The Solaris interactive install dialog has not been localized except for the title. The section that has not been localized begins with:

You'll be using the initial option
--

French and Italian Install Wizards May Display {0} Instead of the CD Title (4302549)

{0} is occasionally displayed in French and Italian where a CD title should appear.

Motif suninstall Fails in de_AT.ISO8859-15 and fr_BE.ISO8859-15 Locales (4305420)

Installing the operating environment by using the two languages specified causes parts of the installation process to be displayed in English. In addition, not all localization packages are installed. The following message is displayed:

```
XView warning: "de" kann nicht als Sprachumgebungs-Kategorie  
Ausgabesprache (gesetzt über Umgebungsvariable(n)) verwendet  
werden, wenn Standardsprache auf "de_AT.ISO8859-15" gesetzt ist  
(Server Package)  
XView warning: Requested input method style not supported.  
(Server package)
```

Workaround: Install the Solaris operating environment using the German or French ISO8859-1 locales.

German Locale: Add and Cancel Buttons in the Proxy Kiosk Screen are Labeled as Undefined (4306260)

The German Web Start Kiosk proxy information dialog has the OK and Cancel buttons labeled as *Undefined*. The button on the left should be OK and the button on the right should be Cancel.

Solaris Runtime Issues

The following bug descriptions have been added to this chapter since this document was published on the Solaris 8 Documentation CD (listed in numerically ascending order):

- Bug ID 4179411
- Bug ID 4285729
- Bug IDs 4301555, 4301212, 4299487, 4301507, 4304495
- Bug ID 4301870
- Bug ID 4302983
- Bug ID 4303879
- Bug ID 4304493
- Bug ID 4303549
- Bug ID 4306619
- Bug IDs 4306958, 4305075
- Bug ID 4307314
- Bug ID 4308864

Common Desktop Environment (CDE) Issues

User Settings For Screen Blank, Also Known As Monitor Power Saver, Are Ignored

If you use the Power Managed Screen feature of `dtstyle`, you can configure your system such that the monitor becomes blank and enters a power saver mode. These user settings are ignored in this release and therefore the monitor always becomes blank and enters a power saver mode after having been idle for 22 minutes.

Workaround: To disable the Energy Star® monitor power saver mode, run the command.

```
xset -dpm
```

For more information on other monitor power saver configuration options, refer to the `xset` man page.

Common Desktop Environment Bugs

`dtmail` Does Not Produce a Core File By Default (4249157)

`dtmail` does not produce a core file by default.

Workaround: To produce a core file in `dtmail`, set the `mailrc` variable `allowcorefile`. For more information on producing core files, refer to the `core(4)` man page.

PDASync Cannot Delete Last Entry From the Desktop (4260435)

After deleting the last item from the desktop (for example, the last appointment in your Calendar or the last address in the Address Manager when you synchronize the handheld device), the last entry is restored from the handheld device to the desktop.

Workaround: Delete the last entry from the handheld device.

PDASync Does Not Support Data Exchange With the Multibyte Internationalized PDA Device (4263814)

If you exchange multibyte data between a PDA device and Solaris CDE, the data may be corrupted in both environments.

Workaround: Back up your data on your personal computer with the PDA backup utility before you run the PDASync application. If you accidentally exchange multibyte data and corrupt that data, restore your data from the backup.

Compiling Motif Programs on the Solaris 8 Operating Environment (4172061)

A problem occurs when compiling a Motif program in the Solaris 8 operating environment when you link to a shared library that has been compiled in the Solaris 2.4, 2.5, 2.5.1 or 2.6 operating environments and the older library also uses the Motif Application Programming Interface (API).

The Motif program uses Motif version 2.1 and the old shared library uses Motif version 1.2. A core dump occurs. This is not a binary compatibility problem for applications compiled in the Solaris 2.4, 2.5, 2.5.1, 2.6 operating environments, which should run correctly in the Solaris 8 operating environment.

Workaround: If you have an older shared library that links directly to the Motif library, and if you want to compile a program in the Solaris 8 operating environment that links to both Motif and that older shared library, use a line like this to compile:

```
cc foo.c -o program -DMOTIF12_HEADERS -I/usr/openwin/include -I/usr/dt/include  
-lXm12 -lXt -lX11
```

where *program* is the name of the program you are compiling.

System Administration Bugs

Exception: PS_UNAVAILABLE: 1 (out of memory) Error Occurs When Trying To Add Instances With WBEM (4284874)

The following error message indicates that JavaSpaces™ 1.0 has run out of cache memory:

```
Exception: PS_UNAVAILABLE: 1
```

You therefore cannot add more entries to the Common Information Manager Object Manager (CIMOM) Repository.

Workaround: To continue adding CIM classes and instances to the CIM Object Manager Repository.

1. Stop the CIM Object Manager.

```
# /etc/init.d/init.wbem stop
```

2. Restart the CIM Object Manager in Safe Mode.

```
# /usr/sadm/lib/wbem/wbemconfig safe
```

This increases the memory heap and restarts the CIM Object Manager.

WBEM Common Information Model Object Manager Crashes When Solaris_FileSystem Instances Are Requested (4301275)

If you enumerate instances of the Solaris_FileSystem class by using CIM WorkShop or the WBEM APIs, then the CIMOM no longer runs and the following error message is displayed:

```
Attempted to complete RMI action
enumInstances and received exception
java.rmi.UnmarshalException: Error
unmarshaling return header; nested
```

(continued)

```
exception is:  
java.io.EOFException
```

Workaround: Restart the CIMOM by typing the following command in superuser mode.

```
# /etc/init.d/init.wbem start
```

Java Runtime Issues

Java Plug-in Support

Java Plug-in 1.2 is the default plug-in that runs Java 2 applets but not all Java 1.1 applets. If you require the Java Plug-in 1.1, you can download it from <http://www.sun.com/solaris/netscape>.

If you choose to have both Java Plug-in 1.1 and Java Plug-in 1.2 on the same system, you must follow the instructions for how to install Java Plug-in 1.1 and then configure your environment accordingly.

This procedure is outlined in the "Installing Java Plug-in" section of the *Java Plug-in for Solaris Users Guide* that is available from http://www.sun.com/solaris/netscape/jpis/usersguide_java_plugin.html.

Java Runtime Bugs

Warning Messages Are Displayed When Running Java2 Applications In UTF-8 Locales (4254198)

When starting Java2 applications in UTF-8 locales, the following warning message regarding font availability may be displayed.

```
Font specified in font.properties not found  
[-b&h-LucidaBrightLat4-Normal-r-normal--*-%d-*-*-p-*-.iso8859-4]
```

Workaround: Ignore the warning message.

libjvm.so Does Not Function Correctly When Using dlopen (4270715)

libjvm.so does not function correctly if it is brought into the process using dlopen. It must be linked into the executable when that object is created.

Workaround: Explicitly name libjvm.so (-ljvm) and libjava.so (-ljava) as dependencies when you create an executable.

AnswerBook2 Bugs

The ab2admin Command Intermittently Indicates command failed Even Though the Command Succeeded (4242577)

If the ab2admin command fails, the error message contains additional information besides Command failed. For example, it may also include path not found or invalid ID.

Workaround: If the message command failed is displayed, make sure that the operation failed. For example, if the command you submitted should have deleted a collection from the AnswerBook2 database, type the following command to verify that the collection is displayed in the database.

```
# ab2admin -o list
```

You can frequently ignore the message command failed when no additional information is provided.

ab2cd Script Displays an Erroneous Error Message (4256516)

During the startup of an AnswerBook2™ server, the ab2cd script may display the following erroneous error message.

```
sort: can't read /tmp/abl_sort.XXX: No such file or directory
```

This error message states that the *ab2cd* script has not located any of the AnswerBook (Display PostScript™) collections on the CD.

Workaround: Ignore the error message.

Localization Bugs

Some Greek Characters Are Not Available in CDE (4179411)

Some dead-key combinations do not work correctly in CDE. Also, names for months do not function correctly in the Calendar Manager in the Greek locale.

Cannot Print Extended Characters in Calendar Manager in All Partial Locales (4285729)

If you attempt to print extended characters when using Calendar Manager in a partial locale, the extended characters do not print correctly.

Cutting and Pasting Text Between Arabic and UTF-8 English Does Not Work (4287746)

You cannot cut or paste Arabic text between an application or window running under en_US.UTF-8 in Arabic input mode and one running under ar_EY.ISO8859-6 in Arabic input mode.

The Extras Drop-Down Menu Is Not Available for European Locales (4298547)

When you right-click in any CDE application for a European locale, the Extras drop-down menu does not display any options.

CTL Is Not Supported in Japanese and Asian UTF-8 Locales (4300239)

Complex Text Language (CTL) support for entering Hebrew, Arabic, or Thai has been implemented in `en_US.UTF-8` and European UTF-8 locales, but is not supported in `ja_JP.UTF-8`, `ko.UTF-8`, also known as `ko_KR.UTF-8`, `zh.UTF-8`, which is also known as `zh_CH.UTF-8`, and `zh_TW.UTF-8` locales.

Workaround: Use the `en_US.UTF-8` locale if you need to enter Thai, Arabic, or Hebrew using CTL. If you want to enter those languages in Asian and Japanese UTF-8 locales:

1. Create a symbolic link to common CTL modules. In the case of `ja_JP.UTF-8`:

```
# cd /usr/lib/locale/ja_JP.UTF-8
# mkdir LO_LTYPE ; cd LO_LTYPE
# ln -s ../../common/LO_LTYPE/umle.layout.so.1
ja_JP.UTF-8.layout.so.1
# mkdir sparcv9 ; cd sparcv9
# ln -s ../../common/LO_LTYPE/sparcv9/umle.layout.so.1
ja_JP.UTF-8.layout.so.1
```

2. Edit the `/usr/openwin/lib/locale/ja_JP.UTF-8/XLC_LOCALE` file by commenting out the `load_option delay_nocheck` line from Thai, Arabic, or Hebrew entries; for example, in the case of Thai):

```
# fs14 class (Thai)
fs14 {
    charset      TIS620.2533-0:GR
    font {
        # load_option delay_nocheck <-- comment out
        primary     TIS620.2533-0:GR
    }
}
```

Screens in Several Applications Have Not Been Localized (4301212, 4301555, 4299487, 4301507, 4304495)

The applications SmartCard, AnswerBook2, Solaris PDASync, Printer Administrator, and Hotkey Editor are not fully localized.

Cannot Read Arabic Messages Correctly When Using dtmail Between the Solaris Operating Environment and Microsoft Windows (4301870)

Arabic support in the Solaris operating environment is based in Arabic code page iso8859-6, whereas Arabic support in Microsoft Windows supports Microsoft code page 1256. Code page conversion should be performed to exchange Arabic messages between the Solaris operating environment and Microsoft Windows when using dtmail.

Cannot Add, Remove, or Modify Users in Solstice AdminTool in the Greek Locale (4302983)

The Add, Modify, and Remove User screens are blank in the Greek locale of the Solstice AdminTool™.

Workaround: In superuser mode copy the following file :

```
cp /usr/openwin/lib/locale/C/app-defaults/Admin
/usr/openwin/lib/locale/el_GR.ISO8859-7/app-defaults/Admin
```

You can now add, remove, and modify user information in the Greek locale.

Font Downloader Add and Cancel Buttons Are Incorrectly Labeled (4303549)

When you are in the Italian locale using the Font Downloader, both the Add and Cancel buttons in the Add Printer dialog box are incorrectly labeled; they are both labeled A

- The left button should be labeled Aggiungi (ADD).

- The right button should be labeled Annulla (Cancel).

Missing Arabic Characters and Incompatibility Between the Sun Arabic Keyboard and the Microsoft Arabic Keyboard (4303879)

The following table describes the differences between Sun's Solaris Arabic keyboard and Microsoft's Arabic keyboard.

Key	Sun's Keyboard Layout	Microsoft Keyboard Layout
T	T	Arabic Lam_alef with Hamza below
U	U	Right single quotation mark
I	I	Arabic multiplication sign
O	O	Arabic division sign
A	;	Arabic Kasra
S	S	Arabic Kasratan
Z	Z	Tilde
X	X	Arabic Sukun
C	Arabic Kasratan	Left curly bracket
V	Arabic Kasra	Right curly bracket
M	Sukun	Single low qoutation mark
<	<	Arabic comma

Use Font Downloader to Print From Any Non-ISO8859-1 Locale (4304493)

Perform the following steps to print from any non-ISO8859-1 locale using the Font Downloader.

1. Log in to CDE.

2. Type `fdl` at the command line to start the Font Downloader.
3. Specify the printer by selecting Add from the Printer menu.
4. Select Font Bundle from the Download menu.

The font bundles are then downloaded to the specified printer, depending on what codeset is needed for printing.

Unlocalised Messages Displayed in SEAM Application (4306619)

SEAM uses some of the resource files in the Solaris 8 operating environment, but only when the Kerberos settings are selected during an installation.

The Euro Currency Symbol Is Not Adequately Supported in the UTF-8 and Greek Locales (4306958, 4305075)

The Euro currency symbol is not generated when pressing AltGr+E in the UTF-8 locale.

Workaround: Perform the following steps to enter the Euro currency symbol in the UTF-8 locale:

1. Select Lookup in the UTF-8 Input Mode Selection window.
2. Select Currency Symbols.
3. Select the Euro symbol.

Note - In the Greek locale type `dumpcs` at the console prompt. Then copy and paste the Euro currency symbol.

Sorting in the European UTF-8 Locales Does Not Function Correctly (4307314)

Sorting in the European UTF-8 locales does not work properly.

Workaround: Before you attempt to sort in a FIGGS UTF-8 locale, set the `LC_COLLATE` variable to the ISO1 equivalent.

```
# echo $LC_COLLATE
> es_ES.UTF-8
# setenv LC_COLLATE es_ES.IS08859-1
```

Then start sorting.

Hexadecimal Support No Longer Works Correctly in dtcalc With Swedish Localization (4308864)

Pressing the f key in hexadecimal mode activates the Function mode and does not act as the F numeral.

Workaround: Click the f key on the dtcalc display.

Late-Breaking News

The following feature description has been added to this chapter since this document was last published on the Solaris 8 Documentation CD.

- Configuring Runtime Search Paths
-

PIM Kernel Support

The Solaris 8 operating environment includes kernel support for the PIM protocol as described in RFC 2362. The Solaris 8 operating environment does not include the routing daemons, but for those users who want to use Solaris 8 operating environment to route their multicast network traffic, implementations of the PIM protocol (both Sparse and Dense mode) may be found at <http://netweb.usc.edu/pim>.

Configuring Runtime Search Paths

You can now modify the runtime linkers search paths with the `-z nodefaultlib` option to the `ld` command and with runtime configuration files created by the new utility `crle(1)`.

End-of-Software Support Statements

No new end-of-software support statements have been added since this document was published on the Solaris 8 Documentation CD.

Current Release

HotJava Browser

The HotJava™ browser is no longer supported.

Solaris Java Development Kit: JNI 1.0 Interface

The 1.0 version of the Java Native Interface (JNI 1.0) is no longer supported by the Solaris Java Development Kit version 1.2 (JDK 1.2).

Support in the Solaris Java Development Kit (JDK) for the 1.0 version of the Java Native Interface (JNI 1.0) has been removed. JNI 1.0 is also known as the Native Method Interface (NMI).

Solstice AdminSuite 2.3/AutoClient™ 2.1

Solstice AdminSuite 2.3 software is no longer supported with the Solaris 8 operating environment. Any attempt to run Solstice AdminSuite 2.3 to configure Solstice AutoClients or diskless clients will result in a failure for which no patch is available or planned. While it may be possible to manually edit configuration files to enable diskless clients, such an operation is not recommended or supported.

Lightweight Directory Access Protocol (LDAP) Client Library

LDAP client library, `libldap.so.3`, may no longer be supported in a future release. The new version of this library, `libldap.so.4`, is compliant with the `draft-ietf-ldapext-ldap-c-api-04.txt` revision of the `ldap-c-api` draft from the Internet Engineering Task Force (IETF).

F3 Font Technology

F3 fonts and the TypeScaler rasterizer, Sun's proprietary scalable font technology, is no longer supported. Sun will continue to support the industry standard font formats, Type1 and TrueType.

XGL

XGL is no longer supported.

Derived Type `paddr_t`

The `paddr_t` data type found in `sys/types.h` is not supported in the 64-bit compilation environment. It is currently only available in the 32-bit compilation environment.

Changes to Application Programming Interfaces (APIs) for User Accounting Data

Two sets of APIs allow user accounting data to be accessed by applications. The preferred set of programming interfaces for accessing and manipulating user accounting information is described on the `getutxent(3C)` man page. These interfaces are both more capable and more portable than the older `getutent(3C)` routines.

Older applications may access the underlying accounting files directly. The files `/var/adm/utmp` and `/var/adm/wtmp` and the corresponding symbolic links `/etc/utmp` and `/etc/wtmp` are no longer supported. The format of the data contained in these files constrains the future evolution of the Solaris operating environment. Applications using these files should be updated to use the documented and supported APIs.

Applications that are already using the `getutent(3C)` family of routines may be unaffected on small system configurations. However, in future releases these interfaces may return errors when used on very large system configurations. For this reason, use the `getutxent(3C)` routines for both old and new code in place of the `getutent(3C)` APIs.

The `sysidnis(1M)` System Identification Program

`sysidnis(1M)` is no longer supported. `sysidnis(1M)` is the System Identification program responsible for configuring name services during installation, upgrade, and after unconfiguration using `sys-unconfig(1M)`.

`sysidnis(1M)` has been replaced by `sysidns(1M)`.

Sun4c-Based Systems

The following Sun4c-based architecture systems and servers based on these systems are no longer supported.

- SPARCstation™ SLC
- SPARCstation ELC
- SPARCstation IPC
- SPARCstation IPX
- SPARCstation 1
- SPARCstation 1+
- SPARCstation 2

Note - All hardware options (such as SCSI devices) and supported configurations that are dependent on the Sun4c-based architecture are no longer supported.

SPARCstation Voyager

SPARCstation Voyager™ systems are no longer supported.

SPARC Xterminal 1

SPARC Xterminal 1™ systems are no longer supported.

Future Releases

Solstice AdminTool

Solstice AdminTool (`admintool`) may no longer be supported in a future release. This tool performs user management, printer management, software package management, serial port management, group management, and host management.

The print management function is currently available in the Solaris 8 operating environment (see `/usr/sadm/admin/bin/printmgr`).

Solstice Enterprise Agents

Solstice Enterprise Agents may no longer be supported in a future release. This functionality has been replaced by the Solaris Web-Based Enterprise Management (WBEM) Services feature that is released as part of the Solaris 8 operating environment.

XIL

XIL may no longer be supported in a future release. An application using XIL causes the following warning message to be displayed.

```
WARNING: XIL OBSOLESCENCE
This application uses the Solaris XIL interface
which has been declared obsolete and may not be
present in version of Solaris beyond Solaris 8.
Please notify your application supplier.
The message can be suppressed by setting the environment variable
"_XIL_SUPPRESS_OBSOLETE_MSG."
```

crash(1M) Utility

The `crash(1M)` utility may no longer be supported in a future release. The `crash` command is a utility that examines system crash dump files, whose functionality is superseded by the new `mdb(1)` utility. The `crash` command's interface has been structured around implementation details, such as slots, that have no relation to the Solaris operating system implementation.

To enable the transition the Solaris 8 operating environment includes documentation about the `mdb` syntax that is equivalent to each `crash` subcommand.

Kerberos Version 4 Client

The Kerberos version 4 client may be removed in a future release. This includes the Kerberos version 4 support in the `kinit(1)`, `kdestroy(1)`, `klist(1)`, `ksrvtgt(1)`, `mount_nfs(1M)`, `share(1M)`, and `kerbdc(1M)` commands, in the *kerberos(3N)* library, and in the ONC RPC programming API `kerberos_rpc(3KRB)`.

adb(1) Map Modifiers and Watchpoint Syntax

The `adb(1)` utility may be implemented as a link to the new `mdb(1)` utility in a future version of the Solaris 8 operating environment.

The `mdb(1)` man page describes the features of the new debugger, including its `adb(1)` compatibility mode. Even in this compatibility mode, differences between `adb(1)` and `mdb(1)` exist. They are:

- The text output format of some subcommands is different in `mdb(1)`. Macro files are formatted using the same rules, but scripts that depend on the output of other subcommands may need to be modified.
- The watchpoint length specifier syntax in `mdb(1)` is different from the syntax described in `adb(1)`. The `adb(1)` watchpoint commands `:w`, `:a`, and `:p` allow an integer length (in bytes) to be inserted between the colon and the command character. In `mdb(1)`, the count should be specified following the initial address as a repeat count.

The `adb(1)` command `123:456w` is specified in `mdb(1)` as `123,456:w`.

- The `/m`, `/*m`, `?m`, and `?*m` format specifiers are not recognized or supported by `mdb(1)`.

OpenWindows Toolkits For Developers

OpenWindows™ XView™ and OLIT™ toolkits may no longer be supported in a future release. You may want to migrate to the Motif toolkit. To disable the warning message, use `#define OWTOOLKIT_WARNING_DISABLED` or `-D`.

OpenWindows Environment For Users

The OpenWindows environment may no longer be supported in a future release. You may want to migrate to CDE, the Common Desktop Environment.

Federated Naming Service (FNS)/XFN Libraries and Commands

The Federated Naming Service based on the X/Open XFN standard may no longer be supported in a future release.

Solaris ipcs(1) Command

The ability to apply the `ipcs(1)` command to system crash dumps using the `-C` and `-N` command line options may no longer be supported in a future release. Equivalent functionality is now provided by the `mdb(1) ::ipcs` debugger command.

Deprecate sendmail -AutoRebuildAliases Option

The `-AutoRebuildAliases` option for the `sendmail(1m)` man page is deprecated and may no longer be supported in a future release.

Sun4d-Based Servers

The following Sun4d-based architecture servers may no longer be supported in a future release.

- SPARCserver™ 1000
- SPARCcenter™ 2000

Hardware options that are dependent on the Sun4d-based architecture may no longer be supported in a future release.

Documentation Issues

The following documentation issues have been added to this chapter since this document was published on the Solaris 8 Documentation CD.

- Incorrect version of the *What's New in the Solaris 8 Operating Environment* on the Kiosk on the Solaris 8 Installation CD
 - Commands in “Full Backup Commands” in *Solaris 8 (SPARC Platform Edition) Installation Guide* are incorrect.
-

Documentation Errata

Document Affected: “Full Backup Commands” in *Solaris 8 (SPARC Platform Edition) Installation Guide*

The commands in Table 3–3 in “Full Backup Commands” in the *Solaris 8 (SPARC Platform Edition) Installation Guide* are incorrect. They should read as follows:

TABLE 5-1 Backup Commands

To make a full backup on a	Use this command
Local cartridge tape drive	<code>ufsdump 9ucf /dev/rmt files_to_backup</code>
Remote cartridge tape drive	<code>ufsdump 0ucf remote_host:/ files_to_backup</code>

Document Affected: *What's New in the Solaris 8 Operating Environment*

The version of the *What's New in the Solaris 8 Operating Environment* available through the kiosk on the Solaris 8 Installation CD has been superseded. For the latest version of *What's New in the Solaris 8 Operating Environment*, refer to the Solaris 8 Documentation CD or to <http://docs.sun.com>.

Document Affected: “IPv6 Header Format” in *System Administration Guide, Volume 3*

The 4-bit Priority field description reflects RFC 1883, which has been obsoleted by RFC 2460 (Solaris 8 implements RFC 2460). Consequently, the Priority field has been replaced by an 8-bit Traffic Class field. The IPv6 Header Format figure should identify the Traffic Class field in place of the Priority field. The Priority bullet on this page should also be replaced by the following Traffic Class description:

Traffic Class - 8 bit traffic class field.

This new value also reduces the number of bits allocated to the "Flow Label" field to 20 bits.

Document Affected: “Priority Values” in *System Administration Guide, Volume 3*

The 4-bit Priority field description reflects RFC 1883, which has been obsoleted by RFC 2460 (Solaris 8 implements RFC 2460). Consequently, the Priority field has been replaced by the 8-bit Traffic Class field. The Priority section should be replaced by the following Traffic Classes section.

Traffic Classes

Originating nodes and forwarding routers can use the 8-bit Traffic Class field in the IPv6 header to identify and distinguish between different classes or priorities of IPv6 packets.

The following general requirements apply to the Traffic Class field.

- The service interface to the IPv6 service within a node must provide a means for an upper-layer protocol to supply the value of the Traffic Class bits in packets originated by that upper-layer protocol. The default value must be zero for all 8 bits.
- Nodes that support a specific use of some or all of the Traffic Class bits can change the value of those bits in packets that they originate, forward, or receive, as required for that specific use. Nodes should ignore and leave unchanged any bits of the Traffic Class field for which they do not support a specific use.

Document Affected: “Implementing IPsec” in *System Administration Guide, Volume 3*

Step 10c in this procedure incorrectly omits the addition of the *up* parameter required in the line added to the */etc/hostname.ip.tun0* file. Consequently, the *up* parameter must be added at the end of the line entry in this step.

Document Affected: “NFS Parameters for the nfs Module” in *System Administration Guide, Volume 3 (4299091)*

Several corrections apply to this section:

- For the *nfs_32_time_ok* symbol:
 - Change the symbol name to: *nfs_allow_preePOCH_time*.
 - Change the description to: This symbol controls whether the NFS client or server allows file time stamps that precede 1970.
 - No change to the default description.
 - Delete the *nfs_acl_cache* symbol entry.
- Add a *nfs_disable_rddir_cache* symbol entry.

- Description: Some servers do not properly update the attributes of the directory when changes are made. To allow interoperability with these broken servers, set this variable to disable the `readdir` cache.
- Default: Set to `off(0)`.
- For the `nfs_lookup_neg_cache` and `nfs3_lookup_neg_cache` symbols:
 - Change the default to 1. Ignore the comment about the directory name caching.
- For the `nrnode` symbol:
 - Change the default description to: *set to ncsiz*. By setting the variable to 1 you are effectively disabling the cache, not because there is an explicit check to see whether or not it is 1, but because you are creating a very small cache.
- For the `nfs_write_error_interval` symbol:
 - Change the description: This symbol controls how often NFS ENOSPC and EDQUOT write error messages are logged. Its units are in seconds.
 - No change to the default description.

Document Affected: “NFS Parameters for the `nfs` Module” in *System Administration Guide, Volume 3* (4299091)

- Delete the `nfsreadmap` symbol entry.

Document Affected: “NFS Parameters for `rpcsec` Parameters” in *System Administration Guide, Volume 3* (4299091)

For the `authdes_cachesz` symbol:

- Change the default description: Defaults to 1024.
- Delete the `authkerb_cachesz` symbol entry.
- Delete the `authkerb_win` symbol entry.

CERT Advisories

This chapter lists all CERT Advisories as of 1/6/2000.

CERT Advisory	Topic	Fix Integrated in OS Version	Comments
CA-96.01	UDP Port Denial-of-Service Attack	Solaris 2.5.1	See CERT Advisory for more details
CA-96.03	Kerberos 4 Key Server	N/A	See CERT Advisory for more details
CA-96.04	Corrupt Information from Network Servers	Solaris 2.5.1	Solaris 8 operating environment not affected
CA-96.05	Java™	N/A	Solaris 8 operating environment not affected
CA-96.06	NCSA/Apache CGI	N/A	Solaris 8 operating environment not affected
CA-96.07	Java Bytecode Verifier	N/A	See CERT Advisory for more details
CA-96.08	PCNFSD	N/A	
CA-96.09	rps.statd	Solaris 2.5.1	
CA-96.10	NIS+ Configuration	Solaris 2.5.1	

CERT Advisory	Topic	Fix Integrated in OS Version	Comments
CA-96.11	Interpreters in CGI bin	N/A	
CA-96.12	suidperl	N/A

CA-97.21	SGI Buffer	N/A	
CA-97.22	bind	Solaris 7	
CA-97.23	rdist	Solaris 7	

CERT Advisory	Topic	Fix Integrated in OS Version	Comments
CA-97.24	Count_cgi	N/A	
CA-97.25	CGI_metachar	N/A	
CA-97.26	statd	Solaris 2.6	
CA-97.27	FTP bound	Solaris 2.6	
CA-97.28	Teardrop and Land	N/A	Solaris 8 operating environment not affected
CA-98.01	smurf	N/A	See CERT Advisory for more details
CA-98.02	CDE	Solaris 7 and 8	
CA-98.03	ssh-agent	N/A	
CA-98.04	Microsoft Windows	N/A	
CA-98.05	bind_problems	Solaris 7	
CA-98.06	nisd	Solaris 7	
CA-98.07	PKCS	N/A	Solaris 8 operating environment not affected
CA-98.08	qpopper_vul	N/A	
CA-98.09	imapd	N/A	Solaris 8 operating environment not affected
CA-98.10	Mime buffer overflow	Solaris 7	
CA-98.11	tooltalk	Solaris 7	
CA-98.12	mountd	N/A	Solaris 8 operating environment not affected
CA-99-01	Trojan-TC	N/A	
CA-99-02	Trojan-Horse	N/A	

CERT Advisory	Topic	Fix Integrated in OS Version	Comments
CA-99-03	FTP buffer overflows	N/A	Solaris 8 operating environment not affected
CA-99-04	Melissa	N/A	Solaris 8 operating environment not affected
CA-99-05	statd-automountd	Solaris 7 (statd) Solaris 2.6 (automount)	
CA-99-06	exploresip	N/A	Solaris 8 operating environment not affected
CA-99-07	IIS buffer overflow	N/A	
CA-99-08	rpc.cmsd	Solaris 8	
CA-99-09	arrayd	N/A	
CA-99-10	cobalt.rag2	N/A	
CA-99-11	CDE		Solaris 8 operating environment not affected
CA-99-12	amd		Solaris 8 operating environment not affected
CA-99-13	wuftpd		Solaris 8 operating environment not affected
CA-99-14	bind		Solaris 8 operating environment not affected
CA-99-15	RSAREF2		Solaris 8 operating environment not affected

CERT Advisory	Topic	Fix Integrated in OS Version	Comments
CA-99-16	sadmin		Solaris 8 operating environment not affected
CA-99-17	Denial of service tools		Not part of the Solaris 8 operating environment. See Sun Security Bulletin #00193

Released Patches Integrated into the Solaris 8 Release

This is a list of recent revisions of Solaris patches whose fixes are included in the Solaris 8 release.

To provide you with current information about the latest patch revisions whose bug fixes have been included in the Solaris 8 release, this list provides information about:

- Officially released Solaris 2.4, 2.5, 2.5.1, 2.6, 7, and 8 patches
- Recently issued patches that have not yet been officially released (called "T" or temporary patches).

The following patches have been added to this chapter since this document was last published on the Solaris 8 Documentation CD:

- Patch-ID# T106857-01 (Preliminary Patch - Not Yet Released)
 - Patch-ID# T107933-02 (Preliminary Patch - Not Yet Released)
 - Patch-ID# 108240-01
-

Patches

Patch-ID# 106956-04

Keywords: mibcodegen sdk SDK SUNWsasdk

Synopsis: Solstice Enterprise Agent 1.0.3: For SNMP and DMI Toolkit SUNWsasdk

(continued)

Relevant Architectures: sparc
 BugId's fixed with this patch: 4266410 4189025 4218931 4186361

Patch-ID# 101513-14

Keywords: security y2000 year 2000 calendar month view

Synopsis: OpenWindows 3.3: Calendar Manager patch

SunOS Release: 5.3

Relevant Architectures: sparc

BugId's fixed with this patch: 1153124 1166305 1174409 1173071 1167466 1265008
 4052365 4045161 4049725 4047146 1175511 4109608 1105944 4230754

Patch-ID# 101945-62

Keywords: security y2000 libsocket automountd libc kadb ufs Neutron watchdog ip

Synopsis: SunOS 5.4: Kernel update

SunOS Release: 5.4

Relevant Architectures: sparc

Patch-ID# T102138-03 (Preliminary Patch - Not Yet Released)

Keywords: cpio truncate core pass permissions modification times symlink

Synopsis: SunOS 5.4: cpio fixes

SunOS release: 5.4

Relevant Architectures: sparc

BugId's fixed with this patch: 1173917 1202134 4013356 4104534 4231078 4248026

Patch-ID# 106990-01

Keywords: security uux buffer overflow

Synopsis: SunOS 5.4: uux has buffer overflow problems

SunOS Release: 5.4

Relevant Architectures: sparc

BugId's fixed with this patch: 4179980

Patch-ID# 106912-01

Keywords: security man catman 775 temp

Synopsis: SunOS 5.4: /usr/bin/apropos patch

SunOS Release: 5.4

Relevant Architectures: sparc

BugId's fixed with this patch: 4107178 4154565

Patch-ID# 107494-01

Keywords: y2000 runacct loginlog

Synopsis: SunOS 5.4: Y2000, runacct cannot update /var/adm/acct/sum/loginlog

SunOS Release: 5.4

Relevant Architectures: sparc

BugId's fixed with this patch: 4212054

Patch-ID# T104172-19 (Preliminary Patch - Not Yet Released)

Keywords: i18n metatool disk mirror stripe RAID HA AP replica prepatch y2000

Synopsis: Solstice DiskSuite 4.1: Jumbo patch

SunOS Release: 5.4 or later

Relevant Architectures: sparc

SunOS Release: 5.7

Relevant Architectures: sparc

BugId's fixed with this patch: 4184049

Patch-ID# 107374-01

Keywords: xview core cmdtool

Synopsis: OpenWindows 3.6.1: Xview Patch

SunOS Release: 5.7

Relevant Architectures: sparc

BugId's fixed with this patch: 4141064

Patch-ID# T108331-01 (Preliminary Patch - Not Yet Released)

Keywords: security set-uid uucp uustat buffer stack

Synopsis: SunOS 5.7: /usr/bin/uustat patch

SunOS release: 5.7

Relevant Architectures: sparc

BugId's fixed with this patch: 4164924

Patch-ID# 107330-01

Keywords: ntpdate -w packet

Synopsis: SunOS 5.7: /usr/sbin/ntpdate patch

SunOS Release: 5.7

Relevant Architectures: sparc

BugId's fixed with this patch: 4201436

(continued)

Patch-ID# T108327-01 (Preliminary Patch - Not Yet Released)
Keywords: security set-uid uucp cu buffer stack
Synopsis: SunOS 5.7: /usr/bin/cu patch
SunOS release: 5.7
Relevant Architectures: sparc
BugId's fixed with this patch: 4164924

Patch-ID# 108319-01
Keywords: batch temporary open(2) NFS
Synopsis: SunOS 5.7: /usr/bin/at patch
SunOS Release: 5.7
Relevant Architectures: sparc
BugId's fixed with this patch: 4215586

Patch-ID# 108311-01
Keywords: head 1024 character
Synopsis: SunOS 5.7: /usr/bin/head patch
SunOS Release: 5.7
Relevant Architectures: sparc
BugId's fixed with this patch: 4076487

Patch-ID# 108301-01
Keywords: security in.tftpd read(2) errno syscall
Synopsis: SunOS 5.7: /usr/sbin/in.tftpd patch
SunOS Release: 5.7
Relevant Architectures: sparc
BugId's fixed with this patch: 4254347

Patch-ID# T108299-01 (Preliminary Patch - Not Yet Released)
Keywords: rmt largefiles
Synopsis: SunOS 5.7: /usr/sbin/rmt patch
SunOS release: 5.7
Relevant Architectures: sparc
BugId's fixed with this patch: 4109806

Patch-ID# 107293-01
Keywords: gsscred libgss.so.1 memory kerberos
Synopsis: SunOS 5.7: libgss.so.1 and gsscred patch
SunOS release: 5.7
Relevant Architectures: sparc
BugId's fixed with this patch: 4195223

Patch-ID# T108285-01 (Preliminary Patch - Not Yet Released)
Keywords: MOUNTFSYS quotacheck mnttab
Synopsis: SunOS 5.7: /etc/init.d/MOUNTFSYS patch
SunOS release: 5.7
Relevant Architectures: sparc
BugId's fixed with this patch: 4242666

Patch-ID# 107233-01
Keywords: xterm kill
Synopsis: OpenWindows 3.6.1: xterm patch

(continued)

SunOS Release: 5.7
Relevant Architectures: sparc
BugId's fixed with this patch: 4184297

Patch-ID# 108224-01
Keywords: envctrl mutex panic
Synopsis: SunOS 5.7: envctrl driver patch
SunOS Release: 5.7
Relevant Architectures: sparc
BugId's fixed with this patch: 4257172

Patch-ID# 107175-01
Keywords: SUNWman man manual pages date date.1
Synopsis: SunOS 5.7: Manual page for date.1
SunOS Release: 5.7
Relevant Architectures: sparc
BugId's fixed with this patch: 4176353

Patch-ID# 108170-01
Keywords: showrev core Xsun
Synopsis: SunOS 5.7: showrev patch
SunOS Release: 5.7
Relevant Architectures: sparc
BugId's fixed with this patch: 4162298

Patch-ID# 108162-01
Keywords: jsh rsh itos() temp
Synopsis: SunOS 5.7: jsh, rsh, sh patch
SunOS Release: 5.7
Relevant Architectures: sparc
BugId's fixed with this patch: 4215604

Patch-ID# T108117-01 (Preliminary Patch - Not Yet Released)
Keywords: Fontserver crashes
Synopsis: OpenWindows 3.6.1 Font Server patch
SunOS Release: 5.7
Relevant Architectures: sparc
BugId's fixed with this patch: 4239205

Patch-ID# 107076-01
Keywords: cdrom eject panic vol
Synopsis: SunOS 5.7: /usr/kernel/driv/vol and /usr/kernel/driv/sparcv9/vol patch
SunOS Release: 5.7
Relevant Architectures: sparc
BugId's fixed with this patch: 4181968

Patch-ID# T108061-01 (Preliminary Patch - Not Yet Released)
Keywords: dtmail print non iso1 locales
Synopsis: Cannot print in dtmail in any non iso-1 locale
SunOS Release: 5.7
Relevant Architectures: sparc
BugId's fixed with this patch: 4072209

(continued)

Patch-ID# 107059-01

Keywords: sort non-whitespace separator

Synopsis: SunOS 5.7: /usr/bin/sort and /usr/xpg4/bin/sort patch

SunOS Release: 5.7

Relevant Architectures: sparc

BugId's fixed with this patch: 4181185

Patch-ID# 107038-01

Keywords: security catman directory permissions apropos whatis man

Synopsis: SunOS 5.7: apropos/catman/man/whatis patch

SunOS Release: 5.7

Relevant Architectures: sparc

BugId's fixed with this patch: 4107178 4154565

Patch-ID# 107018-01

Keywords: res_mkquery libresolv __confcheck in.named

Synopsis: SunOS 5.7: /usr/sbin/in.named patch

SunOS Release: 5.7

Relevant Architectures: sparc

BugId's fixed with this patch: 4134616

Patch-ID# T107147-04 (Preliminary Patch - Not Yet Released)

Keywords: pci DVMA IOMMU_PAGESIZE dvma_addr panic ecc

Synopsis: SunOS 5.7: pci driver patch

SunOS release: 5.7

Relevant Architectures: sparc.sun4u

BugId's fixed with this patch: 4170981 4177530 4180438 4205258 4205298 4224713

Patch-ID# T106144-16 (Preliminary Patch - Not Yet Released)

Keywords:afb afb.udecode afbconfig afbdaemon afbinit ddx window xgl

Synopsis: SunOS 5.7: Elite3D AFB Graphics Patch

SunOS Release: 5.7

Relevant Architectures: sun4u

BugId's fixed with this patch: 4136467 4160577 4163164 4165917 4169127 4170600
