hp OpenView storage data protector 6.1 Platform & Integration Support Matrices

Version: Draft 4

Date: December 1, 2007

NOTE: For the following Data Protector components, only those combinations of Data Protector component and Operating Systems are supported for which the corresponding Operating System version is supported by the respective vendors. The supported operating system "Windows 2003" includes support for Windows 2003 R2 and Windows Storage Server 2003 R2 where applicable.

- ¹ Oracle 9i, 10g and 11g covers all released versions of Oracle 9i, 10g and 11g e. g. 9.x.x and 10.x.x, 11x.x
- ² Includes support for Redhat Enterprise Linux Advanced Workstation and Enterprise Server also
- ³ DB2 EEE (Partitioned databases) is not supported.
- ⁴ In Lotus Domino/Notes R6 (6.0.x), there is a bug in the Domino/Notes backup API. This affects incremental backups, but has been resolved by IBM. IBM provides this fix to their customers on request. The customer can get the fix for their version of R6 from IBM and use it with DP. The customer should open PMR referencing PMR# 66931,004,000 and SPR# WMUH5PJNN4 directly with Lotus Customer Service and mention that a hotfix is required.
- ⁵ Data Protector uses the official SAP backup/restore API (BRTOOLS), which is available only in conjunction with the Oracle database. Therefore, Data Protector support is only dependent on the SAP Brtools version (as supported by SAP in combination with various SAP Kernels) and not on the SAP Kernel version.
- ⁶ Baan users with Oracle, Informix, Microsoft SQL Server or Sybase databases can back up their application data by following the instructions for the integration of Data Protector and their database in the HP OpenView Storage Data Protector 6.1 Integration Guide.
- ⁷ SQL server hotfix Q912021 is required for this support

- ¹ If the Citrix Database is based on one of the Databases for which online integrations is supported, then that integration is used for online backup of the Citrix database. Otherwise Open File Backup should be used for this purpose. In case of backing up the data other than Database, normal Disk Agent should be used. Also Data Protector Cell Manager and Citrix can co-exist on the same server.
